

MIGRAINE & THE GUT

Headache pain isn't the only symptom of a migraine attack.

NAUSEA, VOMITING, GASTRIC STASIS, BLOATING, CONSTIPATION & DIARRHEA CAN OCCUR TOO.

When migraine affects the gut,
ORAL MEDICATION ALONE MAY NOT WORK.

If patients with migraine-associated GI symptoms have tried several oral options without complete relief...

NASAL SPRAYS, DEVICES, INFUSION OR INJECTABLE THERAPIES MAY HELP.

Patients need options to effectively treat their migraine symptoms.
