## to Migraine Treatment Devices

While some migraine patients rely on medications, **others look to headache treatment devices**

**25%** of surveyed patients use a medical device in combination with medication

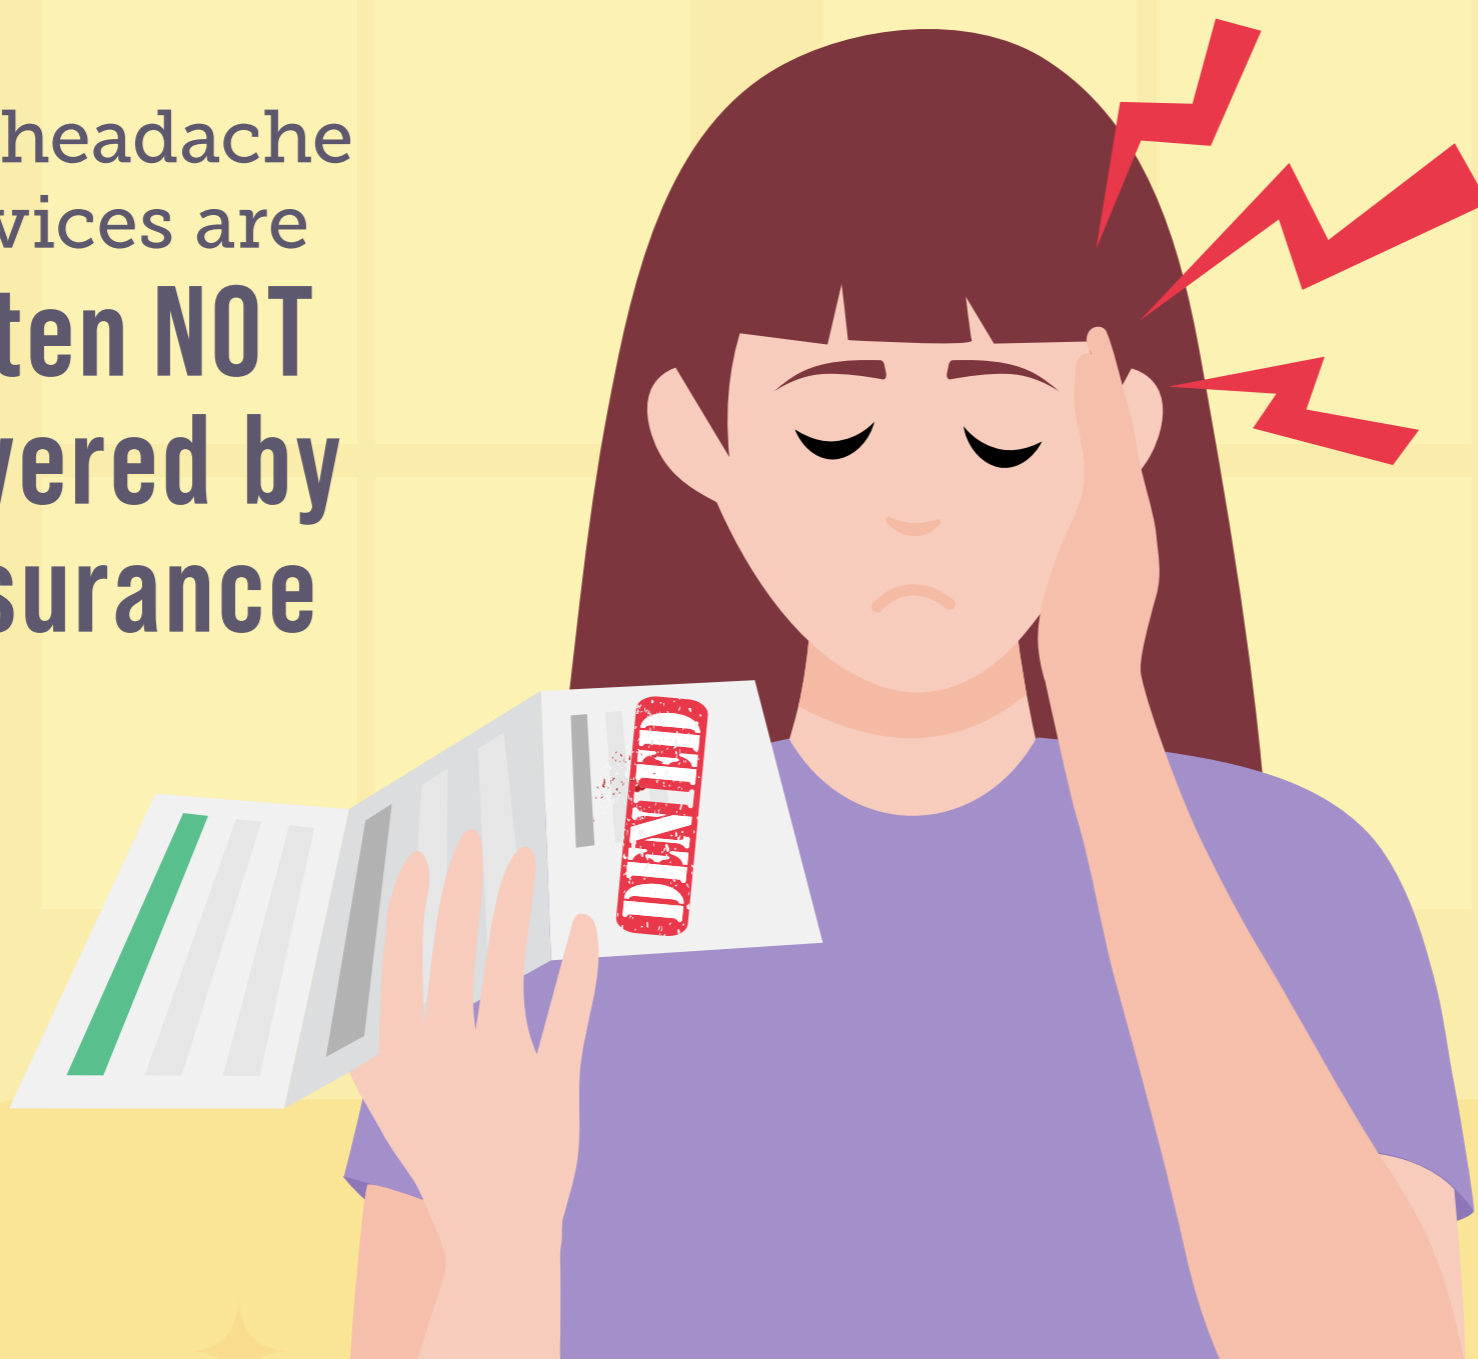

**18%** say symptoms significantly decrease with device use

Keeping migraine disease under control **can limit patients' need for emergency room care:**

- ↓ **Reducing** overall health care costs
- ↓ **Limiting** patients' exposure to suboptimal care

But headache devices are **often NOT covered by insurance**

**1 in 3 patients** who sought insurance coverage for a headache device were denied

**Only 5%** had their devices fully covered
