

# How Inadequate Treatment Leads to Chronic Migraine

**SOME PEOPLE START WITH EPISODIC MIGRAINE,** having 14 attacks or fewer each month.

## THEY SEEK HELP BUT:

-  Can't get in to see a headache specialist
-  Struggle to find the right treatment, including opioid use
-  Are misdiagnosed with anxiety, sinus infections or other common conditions
-  May frequent the ER for pain relief

Without proper treatment, patients may see their episodic attacks become chronic.

Now facing **CHRONIC MIGRAINE**, patients:

Experience 15 or more headache attacks per month

Face immense pain and debilitating symptoms

May become disabled
